

One2OneMate and iRespond Offer Schools Low Cost Web-based Assessment.

FOR IMMEDIATE RELEASE

Los Gatos, CA, and Milton, FL, September 26, 2007 --

Classroom assessment has just taken a turn to the future. Teachers may now monitor and grade student progress using StudentMate™ laptop computer solutions and iRespond™ AnyPlace Web-based grading and reporting software. Students can even complete assignments from home while their teachers watch from another location as responses are graded in real time!

The makers of both products just announced a business alliance that allows customers to use StudentMate computer solutions as a delivery mechanism to access iRespond AnyPlace's online formative assessment tools.

"We are very pleased to have this partnership with iRespond," says Michael Spencer, chief executive officer of One2OneMate™, of Los Gatos, CA, a Division of Alta Heights Technology Corporation. "iRespond AnyPlace allows our customers to use StudentMates not only in the classroom, but also at home."

"Adding the StudentMate to our line of compatible products is another step in our effort to provide our customers with a total technology solution," says Bill Thompson, president of Wireless eSystems, Inc. of Milton, FL. "We were happy to find One2OneMate and to work with them to incorporate iRespond AnyPlace into their product offerings."

StudentMate is the first Linux based laptop solution for education. The StudentMate by One2OneMate features a 7" color screen, full size QWERTY laptop keyboard, wireless and Ethernet connectivity, Flash, web browser, Word and Excel compatible applications, typing tutor, e-mail, a 5 yr. warranty and much more!

iRespond AnyPlace is a new, Web-based version of the iRespond personal response systems. Teachers get real-time information regarding how well their students comprehend the information they are being taught through iRespond's proprietary Teachers' Dashboard software.
